SUMMARY

MSc Advanced AI graduate (UCD, August 2026) and AI Engineer with production experience architecting and deploying GenAI and agentic AI solutions serving 13,000+ users on cloud infrastructure. Shipped production-grade RAG pipelines, multi-agent workflows, LLM inference services, and evaluation frameworks from conception to launch. Hands-on with Python, LangChain, MCP, vector databases, and GCP/AWS/Azure. High-agency engineer comfortable embedding with cross-functional teams to co-build, debug, and deliver enterprise-grade AI systems end-to-end.

EDUCATION

M. Sc. Advanced Artificial Intelligence, University College Dublin (UCD) **Sep 2025 - Present**

Relevant Modules: Advanced ML, Deep Learning, Advanced generative AI & LLMs, AI for health, Recommender systems, Responsible AI, ML System Deployment, Optimisation

B. Tech Information Technology, Sathyabama University, India

Aug 2021 – May 2025

Cumulative GPA: 8.89/10 (1:1 Honours equivalent)

TECHNICAL SKILLS

- **Languages:** Python, JavaScript, Node.js, SQL, Java, C++
- **GenAI & Agentic Systems:** LLMs, Multi-Agent Systems, LangChain, MCP, RAG Pipelines (FAISS, BM25, LLM Reranking), Prompt & Context Engineering, Foundation Models, Hugging Face, PyTorch, TensorFlow
- **Evaluation & Observability:** Evaluation Pipelines, LLM-Native Metrics, Human-in-the-Loop, Performance Monitoring, Responsible AI, Guardrails
- **Cloud & Infrastructure:** GCP, AWS, Azure, Docker, CI/CD Pipelines, GitHub Actions, Kubernetes (exposure), Linux
- **Backend & Data:** FastAPI, Flask, REST APIs, Microservices, Vector Databases, Async Pipelines, PostgreSQL, MongoDB, Supabase, Firebase
- **Practices:** Agile/Scrum, Code Review, Cross-Functional Collaboration, Technical Documentation, Customer-Facing Delivery

WORK EXPERIENCE

AI Developer Intern | AspireRise Ventures Limited – Dublin, Ireland **Mar 2026 – Present**

- Architected and deployed production-grade GenAI solutions serving 13,000+ users — including RAG pipelines (FAISS, BM25, LLM reranking), multi-agent workflows via LangChain, and LLM inference services on cloud infrastructure from conception to launch
- Built evaluation pipelines and observability frameworks ensuring agentic systems meet accuracy, safety, and latency requirements; implemented human-in-the-loop patterns and responsible AI guardrails
- Developed full-stack AI-powered backend services (FastAPI, Node.js, PostgreSQL) integrating APIs, vector databases, and real-time data flows — bridging AI capabilities with live production infrastructure
- Collaborated cross-functionally with technical and non-technical stakeholders to co-build and ship enterprise-grade AI solutions with measurable impact

Software Developer Intern | Hackwit Technologies – Chennai, India

Jan 2024 – Feb 2024

- Improved backend latency and throughput by 30%; shipped 6+ features improving app stability by 28% and reducing bug reports by 18%

Web Developer Intern | HDLC Technologies - Chennai, India

June 2023 - Aug 2023

- Improved database performance by 32% through indexing and SQL optimisation; executed 500+ test cases

PROJECTS

Risk-Aware Health Insurance Recommender [\[Code\]](#)

- Built a production-ready RAG system using FAISS, BM25, and LLM reranking for personalized insurance recommendations.
- Developed FastAPI backend services and structured document processing pipelines.

Joinisai.ie [\[Website\]](#)

- Full-stack SaaS platform (Node.js/Express, Supabase, PostgreSQL) with multi-system REST API integrations, RAG-powered chatbot (LLM inference, vector search), role-specific dashboards, and multi-role authentication (JWT, RBAC, OAuth 2.0) for 4 user types

Hospital Management System [\[Code\]](#)

- Developed automation systems for a healthcare client including appointment booking, WhatsApp/email workflows, payment integrations, revenue dashboards, and calendar synchronization.
- Designed structured workflows for patient data handling and contextual medical query support.

Ethical Validation of Clinical AI [\[Code\]](#)

- Reproduced and evaluated deep learning architectures across 128 benchmark datasets using TensorFlow.
- Improved classification accuracy by 1.30% using feature engineering and GPU-accelerated training pipelines.

CERTIFICATES

[Claude Code](#) – Anthropic | [Python](#) – University of Michigan (Coursera) | [MongoDB Certification](#) – MongoDB Learn | [C and C++ Programming](#) – Apollo Education
